

# Submit your innovation and help Cal-ITP improve California's bus transit network & travel experience

In collaboration with Caltrans' Division of Research, Innovation and System Information (DRISI), Caltrans' California Integrated Travel Project (Cal-ITP) is excited to launch the **Better Buses Innovation Challenge**.

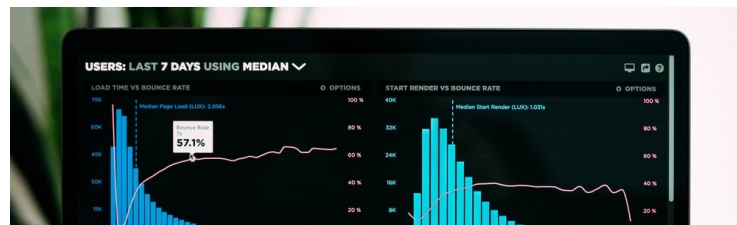

Building off of Cal-ITP's open data and archival efforts—like GTFS Realtime and speed maps—the challenge encourages Caltrans staff as well as external stakeholders to submit ideas that could help improve the bus transit network, an essential part of the state's public transportation system.

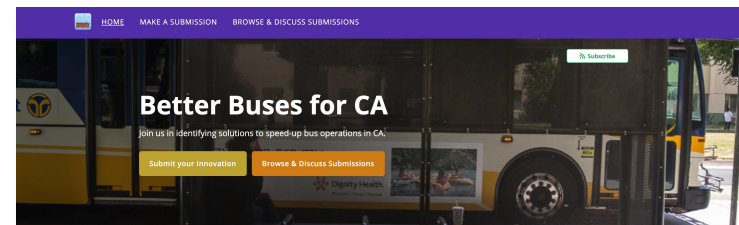

## LET'S IMPROVE THE BUS TRANSIT NETWORK **TOGETHER**

The open data, like GTFS Realtime and speed maps, can help identify locations where buses experience slowdowns.

Respondents are welcome to propose innovative solutions that would help provide frequent and reliable service to commuters.

Take a look at the **speed & delay analysis** [here](#).

**Submit an innovation** [here](#).
